Experience

Pump GTM (YC-backed)

2026 – Present

GTM & Growth

- Run GTM across prospect research, contextual outreach, community content, and founder-led distribution.
- Helped Supermemory acquire customers by identifying relevant buyers, qualifying needs, and tailoring outreach to public conversations.
- Develop Reddit posts, AMAs, and practical outbound guides; coordinate publishing and responses with the team.
- Published a startup-feedback post that received **381 comments**, engaging founders in discussions about their businesses.
- Use competitor discussions and buyer pain points to build prospect lists with clear relevance reasons and message angles.

Tenteron

2026 – Present

Founder, Automation & Growth

Remote

- Built [tenteron.com](#), an AI automation studio developing workflow and agent-based systems for businesses.
- Architected n8n workflows connecting APIs, LLMs, webhooks, databases, lead pipelines, and internal tools.
- Owned positioning, outbound GTM, customer discovery, technical sales, solution scoping, and implementation.

Rector Infrastructure

2025 – 2026

Infrastructure & Systems Engineer

Bangalore

- Worked across system validation, deployment, technical operations, and hardware-software integration.
- Built Python utilities for diagnostic analysis and validation; coordinated hardware, software, and operations teams to resolve integration issues.

External Consultant

Dec 2024 – Aug 2025

Hardware Systems Operations Analyst

Bangalore

- Analyzed diagnostic logs, timing constraints, and validation reports to investigate performance and reliability.
- Built Python and TCL automation for report parsing and engineering analysis; supported manufacturing validation.

Bharat Earth Movers Ltd.

Aug 2024 – Nov 2024

Software Engineer, Operations & Infrastructure

Bangalore

- Worked on Train Control and Monitoring Systems integrating distributed onboard railway subsystems.
- Engineered and validated CAN signalling modules; supported integration, debugging, and fault-tolerance testing.

Technical Skills

GTM: Prospect Research, Lead Qualification, Outbound, Customer Discovery, Technical Sales, Product Positioning

Content: Reddit, X, Community Engagement, Scriptwriting, Video Editing, Hooks, Storytelling, Distribution

Automation & AI: n8n, LLM Workflows, AI Agents, APIs, Webhooks, Data Pipelines

Programming: Python, C, MATLAB, SQL, JavaScript, React, Vite, Tailwind CSS

Systems & Analysis: Linux, Git, MQTT, CAN, System Integration, Validation, Data Analysis, Statistical Modeling

Education

PES University

2020 – 2024

B.Tech, Electronics & Communication Engineering

Minor, Computer Science Engineering

Bangalore, India

Core Strengths

Technical GTM • Growth Experiments • Creator Distribution • AI Automation • Product Engineering

Selected Projects

Readimentary

- Built and shipped an RSVP speed-reading application using React, Vite, PDF.js, and IndexedDB.
- Implemented PDF parsing, persistent reading state, progress tracking, navigation, and responsive rendering.

Reachout

- Built a public social-profile leaderboard centered around a bidding mechanic for ranked placement.
- Integrated hosted payment checkout and webhook-driven transaction verification.
- Designed monetization around profile visibility and dynamic bidding.

Sneaki Productivity Intelligence

- Built a productivity intelligence pipeline capturing application and window activity.
- Converted activity streams into structured events and time-allocation metrics.
- Connected webhook data with LLM categorization for automatic productivity classification.

FPGA Order Book

- Designed a Verilog order-book architecture targeting FPGA-based low-latency market infrastructure.
- Built configurable price, quantity, order, and market-level data structures.
- Developed a Python simulation pipeline spanning feed, order book, strategy, execution, market making, and fills.

bonk-cli

- Built a command-line developer tool for lightweight terminal-based workflows.
- Structured the tool around local usage, reusable commands, and minimal setup overhead.

Statistical Arboreal System

- Built an image-processing classification pipeline using mathematical feature descriptors and comparative matrices.
- Developed probability-based models mapping classifications into automated control decisions.

Real-Time Control Infrastructure

- Designed a hardware-software control system using physical coordinate mapping and low-latency feedback.
- Implemented Python signal filtering and MQTT communication across distributed physical endpoints.

Creator & Social

Instagram

Short-form creator content

2.8 million views on one reel; approximately 10,000 followers. Create short-form videos covering hooks, pacing, storytelling, editing, and captions. Experiment with formats and creator-led distribution.

YouTube

Long-form video + livestreaming

Create and edit videos around technology, products, internet culture, and projects. Handle scripting, structure, editing, presentation, and livestreaming.

X / Twitter

Building in public + tech

Share products, technical experiments, automation workflows, and GTM observations. Use X for product discovery, founder conversations, distribution, and outreach.

Creator Stack: Long-form Video • Livestreaming • Short-form Video • Scriptwriting • Editing • Hooks • Pacing • Storytelling
